

Bedroom exhaust fan in addition

For some reason RV manufacturers don't seem to put an exhaust fan in the bedroom, I don't quite understand why?

I installed a "Fan-Tastic Vent 500RBT", this fan is reversible plus it has a thermostat control.

To install the fan, I had to just select a point in the roof and then move both ways to determine the location of the roots support frame. Once found the cross frames I could cut an opening to the proper size to install the fan which is a very simple process. The hardest process was to pull the electric lines across the ceiling, through the installation, and down through the bathroom wall an electric source.

The fan works great, pulls out any heat at night while was sleeping to a certain point and then automatically shuts down when the temperature drops enough.
