

## **Mini-Server Addition**

With the additional room created by removing the rear 20 inch standard TV it allowed me to add a mini-server with dual SATA backup boxes. The server is directly connected by wire to the HP gigabit switcher mounted upfront, this allows direct access by all the wired and wireless components within the RV.

The mini server is a HP ProLiant Micro-Server were running the Windows home server operating system. Containing a common 800 GB high speed server hard drive with three (3) 1.5 TB green storage hard drives. The entire system operates under 40 W.

There are also two SATA San Digital backup cases with four (4) 1.5 TB hard drives in each case, these are used to back up the system every week.
