

Wired the Satellite cable

Wired the external satellite cabling through the Motorhome's front column into a video select switch located above the Home Entertainment System.

This modification allows us to select using the Motorhome's satellite system or an external satellite dish that can be moved up to 100 feet away from the Motorhome.

The internal, Motorhome's satellite system, is used for quick overnight stops such as rest areas and parking lots, where it's inconvenient to set up a satellite dish. The external satellite dish with its multiple LNB's which allows easy selection between multiple satellite channels is much more convenient for longer stays.
