

Engine Power Chip

Purchased a 'PowerPlay MP-8 #2110203 for a Cat C7' module which connects between the 'MAP' electrical connectors, it was easy to install.

Currently I don't seem to see any big difference in Performance or Economy as of yet, the best I can tell is that any setting below 40% is worst then the original equipment. Settings between 50% and 80% seem to improve my fuel economy by 3% to 5%, but then again I'm still testing the higher settings which seem to show no improvement.
