

Remote Keyless Entry System

This really isn't a modification but more of a repair, but we considered a modification because we never had a working keyless entry system. When we purchased the Motorhome there were no remotes plus examining the wireless unit which seemed to have been water logged at one time (rusted etc.), I figured it didn't work.

To replace the original 'RKE 100FW' unit would run around \$190.00 from eBay, no idea what Fleetwood would charge, so I purchased a 'BigHawks' keyless entry system from Amazon.Com for \$15.00 which came with two key bobs. Then just wired it in as shown in the diagram below, work's great.

Note: The 'Porch Light' and the 'Lock/Unlock' buttons are not functional, these functions would probably another \$20.00 in relays and timer for the porch lights. I'm just too lazy to bother, never had these than I don't miss them!
