

Replace the Over-the-Air TV Antenna

The UHF House TV antenna that I mounted the year before was getting destroyed from the wind, just not made for a Motorhome, had to resort back to a RV type.

Purchased a 'Jack' antenna with a VHF + UHF Built in amplifier, which was a direct replacement for the original TV antenna. Not as good as the UHF antenna but it can withstand the 60 plus mph wind.

Ran both amplifiers, the Jack's and the Winegard Sensor Pro's, inline without a problem, then wired the 12 VDC power to the same switch, so I could power them down together.
