

Second Satellite Receiver

Purchased another 'Dish Network VIP-211k' receiver so we can record and watch up to four programs at once, or piping it to two different TV's so we can both watch what we want.

Note: The older models (from eBay) have dual tuners for both the satellite and over the air digital broadcast. This allows you to record/watch one program from each tuner at the same time.

Work's great with the satellite dish (1000.2 West Arc) which allows up to three receivers at once, well worth the extra \$7 a month. Set one up and the other latches right in.
